# Revert Element to allow re-upload evidences
Deploy Work

At Deploy work we can select any element at build status (*sent - green*) to show info. For Team Work Approver role a new button '*Revert Element*' will be available. This will revert element back to previous status (*blue*) which allow to re-work & re-upload evidences.
For this action an active connection is needed (*online*).

If evidences were uploaded with a previous version of the app this change cannot be done automatically thru the app. Info/warning will be shown with details. If evidences were done already with new app version (starting 2.2.0) then just confirmation message will appear to confirm changes done.

It is not possible to reverse the element by this means. Please contact Support to perform the operation

REVERT ELEMENT

The changes have been successfully reverted.

Rosetta-Vogt-St

On revert action previous existing evidences will be crossed out on the PDF. Also user & timestamp will be logged. E.g.

After new evidences uploaded on same element a new note about the proper page will be added in the original/removed evidence section (new evidences will be added at the end of doc as usual). E.g.
